DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 12-18, drawn to a method for calibrating a camera-laser-unit with respect to at least one calibration-object disposed at a given position and orientation in three dimensional space, the method comprising the steps of: a) selecting a calibration-object having at least two planes disposed at a given angle with respect to each other, each plane having a given, noncoplanar calibration pattern; b) disposing the calibration-object at a given position and orientation in three-dimensional space with respect to the camera-laser-unit, wherein an orientation of the calibration-object is such that light emitted by the laser is visible to the camera on the at least two planes of the calibration-object; c) calibrating the camera with respect to the calibration-object using a Tsai algorithm; d) activating the laser to emit light visible on the at least two planes of the calibration-object; e) recording the light on the two planes with the camera; f) determining the laser-properties from the light recorded by the camera; and g) calibrating the laser according to the determined laser-properties, classified in class 356, subclass 623.
- II. Claims 19-22, drawn to a calibration-object comprising: two planesdisposed at a given angle with respect to each other, each plane having a

Application/Control Number: 10/550,107

Art Unit: 2886

non-coplanar, calibration-pattern with an array of features, wherein the calibration-object is structured and dimensioned for calibration of the camera as well as for calibration of the laser, classified in class 356, subclass 243.1.

Page 3

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, product can be used by another process such as by a) selecting a calibration-object having at least two planes disposed at a given angle with respect to each other, each plane having a given, noncoplanar calibration pattern; b) disposing the calibration-object at a given position and orientation in three-dimensional space with respect to the camera-laser-unit, wherein an orientation of the calibration-object is such that light emitted by the laser is visible to the camera on the at least two planes of the calibration-object; c) calibrating the camera with respect to the calibration-object using a Tsai algorithm; d) activating the laser to emit light visible on the at least two planes of the calibration-object; e) recording the light on the two planes with the camera; f) determining the laser-properties from the light recorded by the camera; and g) calibrating the laser according to the determined laserproperties.

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;
- (c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);
- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C.101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election

shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sang Nguyen whose telephone number is (571) 272-2425. The examiner can normally be reached on 9:30 am to 7:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tarifur Chowdhury can be reached on (571) 272-2800 ext. 86. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for
